Which material is best for my product?

Cellophane is a natural, eco friendly film. It has a great Gas / Aroma Barrier but a low Oxygen + Moisture Barrier, so will not keep products fresh for an extended amount of time. Cellophane is ideal for fast moving goods, products that don't require a long shelf life or non-food items.

Polypropylene RX32 & RX50 is a double coated plastic. It has an excellent Gas / Aroma & Moisture Barrier and will allow products a reasonable shelf life.

TSA40 is an uncoated plastic and has a low Oxygen + Moisture barrier. This film is an ideal cost effective alternative to Cellophane.
